

CDC's Recommendations for HIV Screening in Health Care Settings

Bernard M. Branson, M.D.

Associate Director for Laboratory Diagnostics
Divisions of HIV/AIDS Prevention
National Center for HIV, STD, and TB Prevention
Centers for Disease Control and Prevention

The findings and conclusions in this presentation are those of the author and do not necessarily represent the views of the Centers for Disease Control and Prevention

Defining the Problem: Persons with HIV, United States

Number HIV infected 1,039,000 – 1,185,000

Number unaware of
their HIV infection 252,000 - 312,000 (24%-27%)

Estimated new infections
annually 40,000

Glynn M, Rhodes P. 2005 HIV Prevention Conference

HIV Testing in the United States - 2002

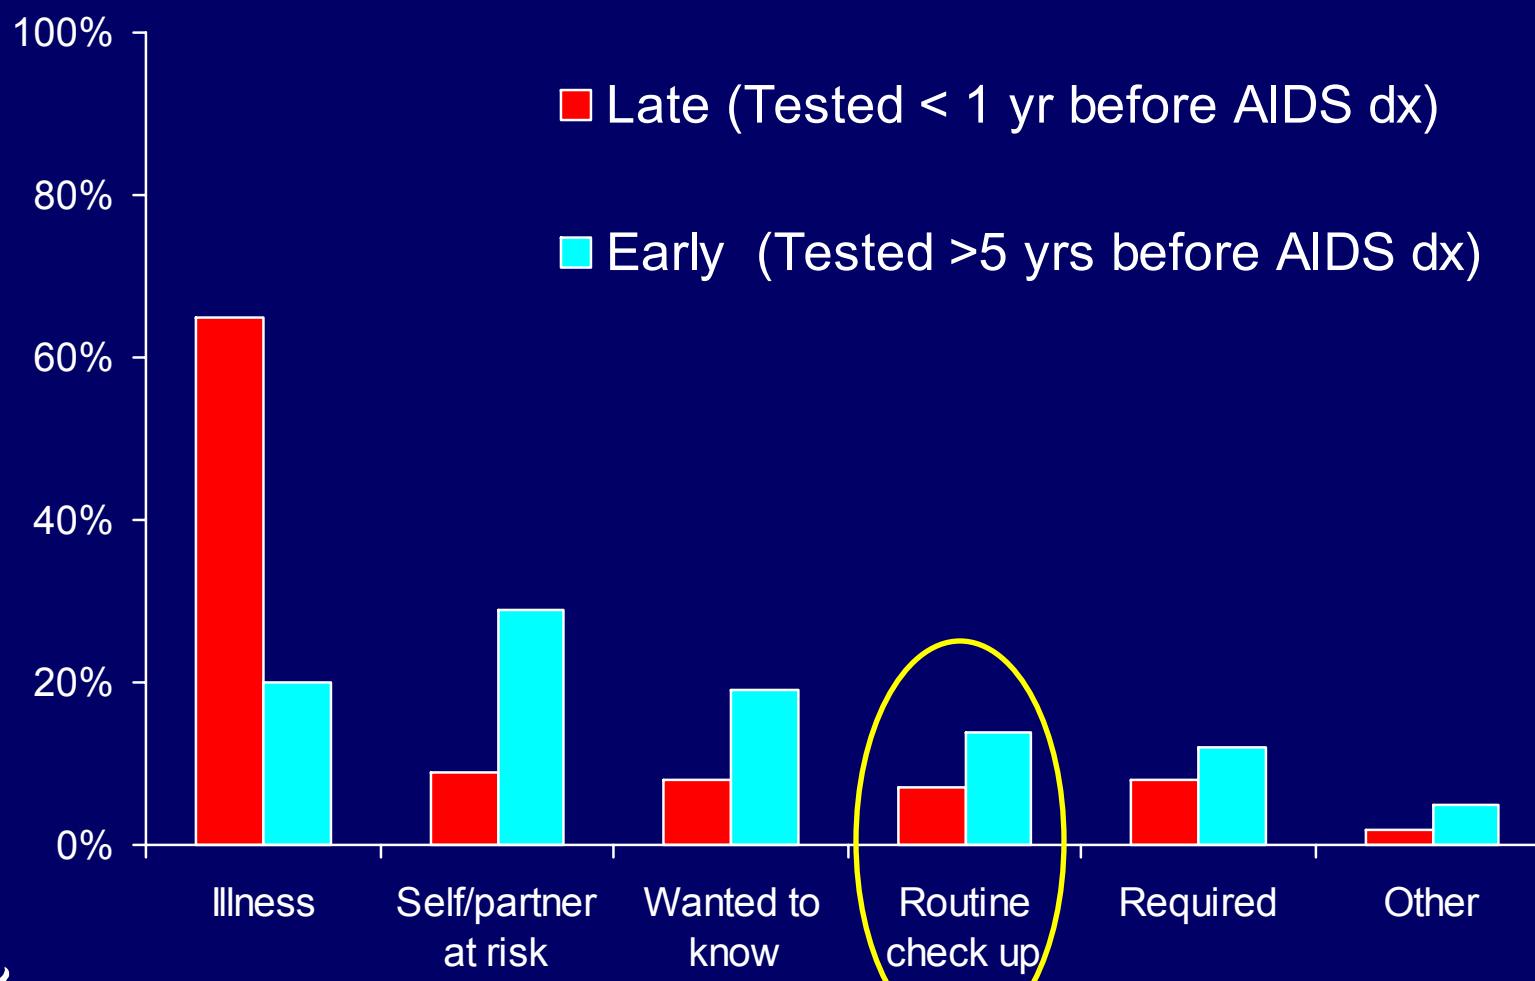

- 38% - 44% of US adults have been tested for HIV
- 16-22 million persons age 18-64 tested annually
- More than 75% of persons report they were tested for HIV in doctor's offices, hospitals, or clinics
- Yet, 40% of persons reported with HIV receive an AIDS diagnosis within 1 year of their first HIV test – on average, 10 years after they first became infected (and infectious).

- *National Health Interview Survey, 2002*
- *CDC HIV Surveillance Report, 2005*

Reasons for testing: late versus early testers

Supplement to HIV/AIDS Surveillance, 2000-2003

MMWR June 27, 2003

Revised Recommendations for HIV Testing of Adults, Adolescents, and Pregnant Women in Health-Care Settings

MMWR 2006;55(No. RR-14):1-17

<http://www.cdc.gov/mmwr>
Recommendations and Reports
September 22, 2006

Revised Recommendations Adults and Adolescents - I

- Routine, voluntary HIV screening for all persons 13-64 in health care settings, not based on risk
- All patients with TB or seeking treatment for STDs should be screened for HIV
- Repeat HIV screening of persons with known risk at least annually

Revised Recommendations Adults and Adolescents - II

- Opt-out HIV screening with the opportunity to ask questions and the option to decline testing
- Separate signed informed consent should not be required
- Prevention counseling in conjunction with HIV screening in health care settings should not be required

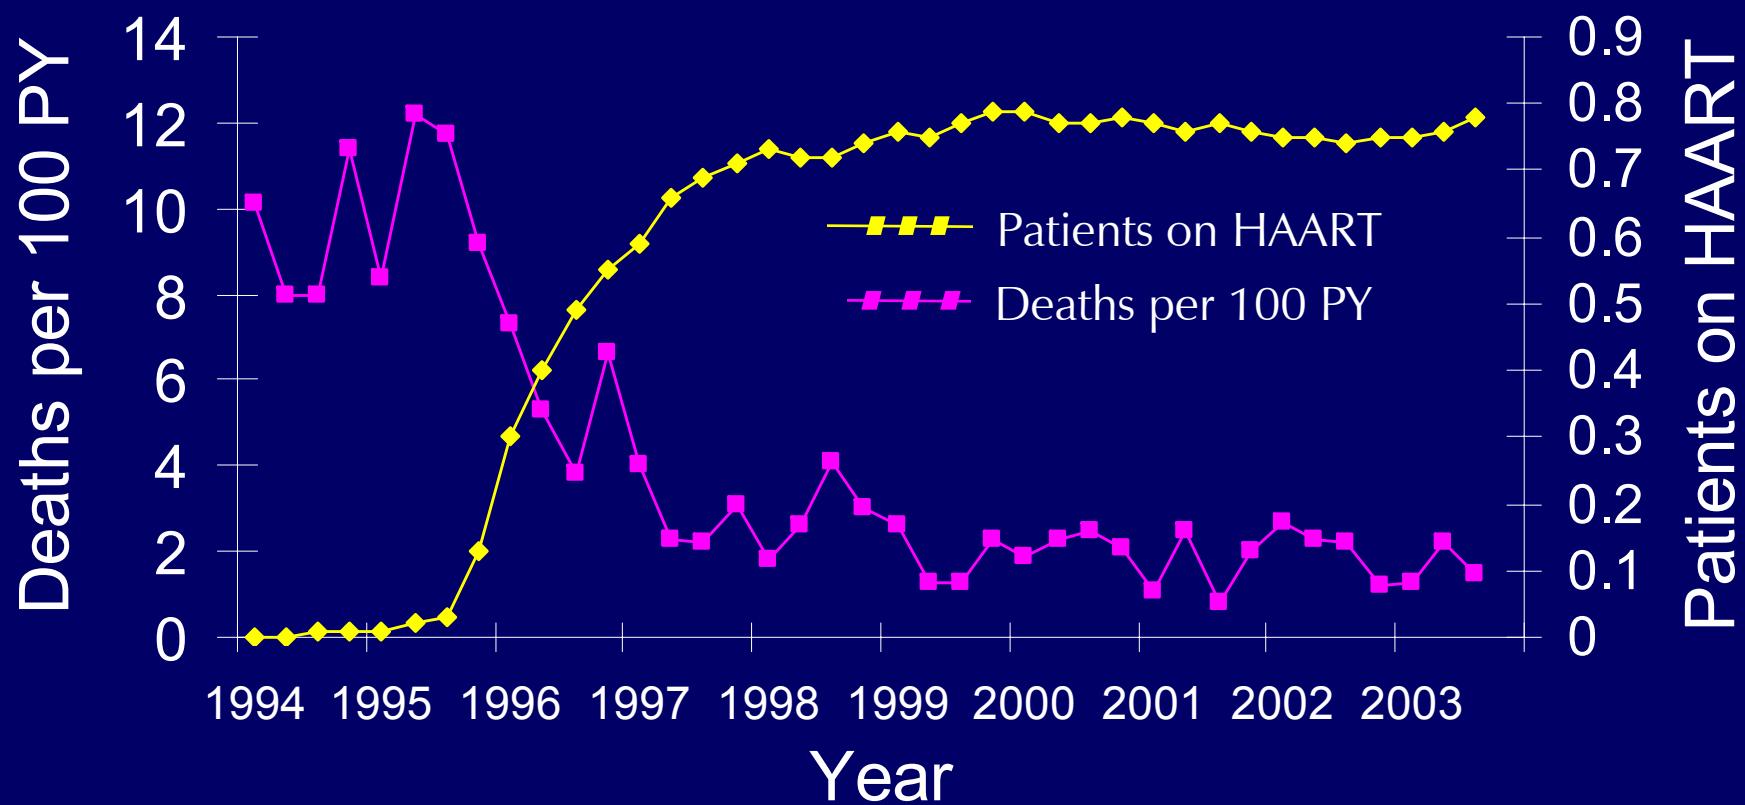

Rationale for Revising Recommendations

Developments related to:

- Treatment
- Testing
- Transmission

Mortality and HAART Use Over Time HIV Outpatient Study, CDC, 1994-2003

-Palella et al, JAIDS 2006; 43:27.

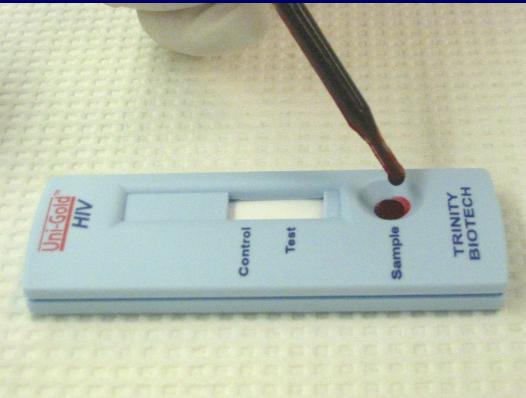

Initial Focus: HIV Screening in Hospitals and Emergency Departments

- CDC studies and demonstration projects:

<u>Site</u>	<u>New HIV+</u>
Cook County ED, Chicago	2.3%
Grady ED, Atlanta	2.7%
Johns Hopkins ED, Baltimore	3.2%
King-Drew Med Center ED, Los Angeles	1.3%
Inpatients, Boston Medical Center	3.8%

Clearview Complete HIV 1/2

Clearview HIV 1/2 Stat Pak

OraQuick Advance

OraQuick Advance HIV-1/2

- CLIA-waived for finger stick, whole blood, oral fluid
- Store at room temperature
- Screens for HIV-1 and 2
- Read time 20-40 minutes
- Shelf life: 6 months

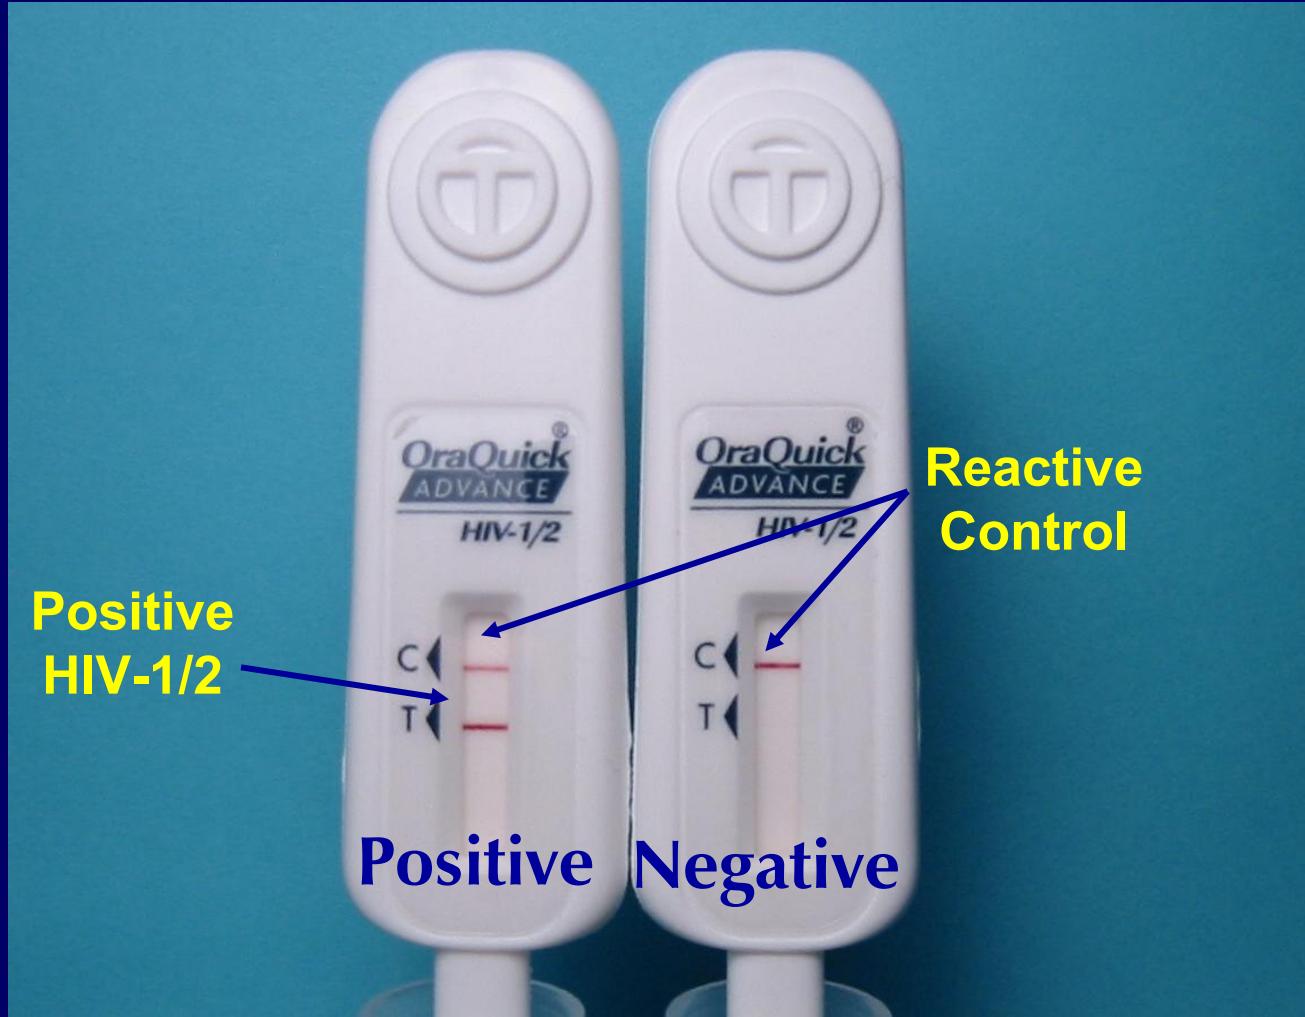

**Collect oral fluid specimens by swabbing gums
with test device.**

Reduce hazards, facilitate testing in field settings

Read results at 20 minutes

Uni-Gold Recombigen

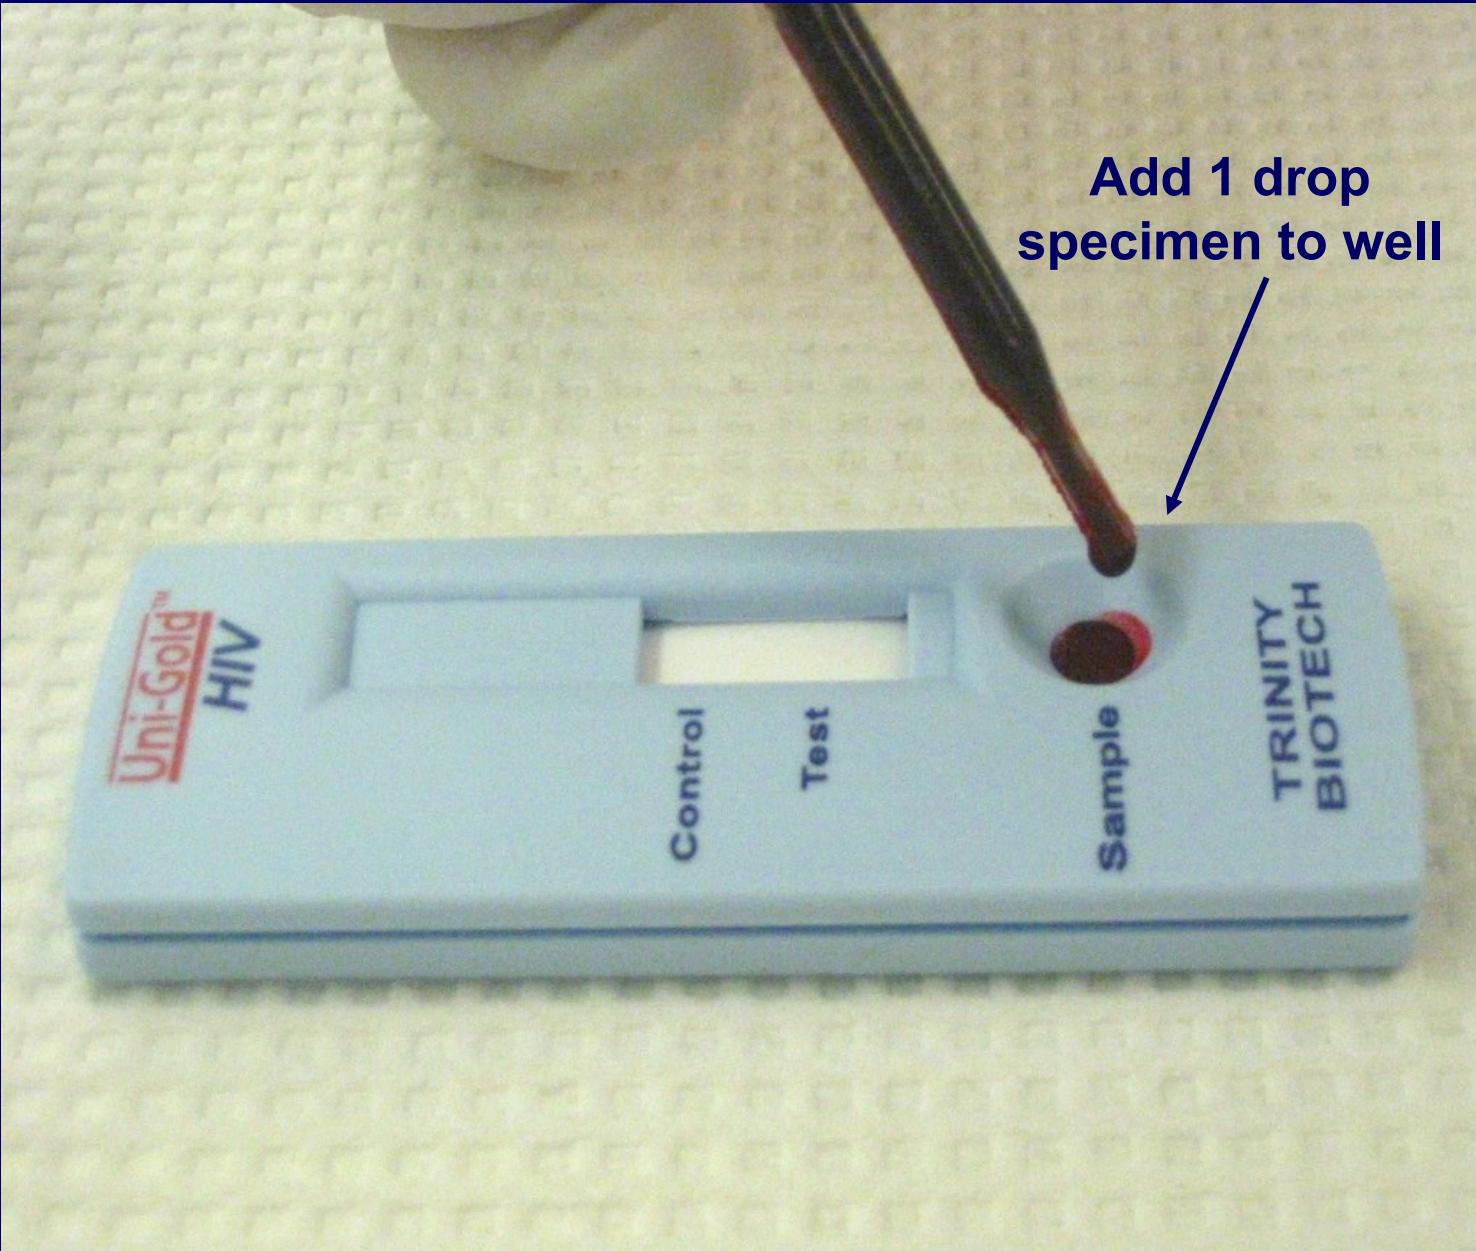

- CLIA-waived for finger stick, whole blood
- Store at room temperature
- Screens for HIV-1
- Read time 10-12 minutes
- Shelf life: 1 year

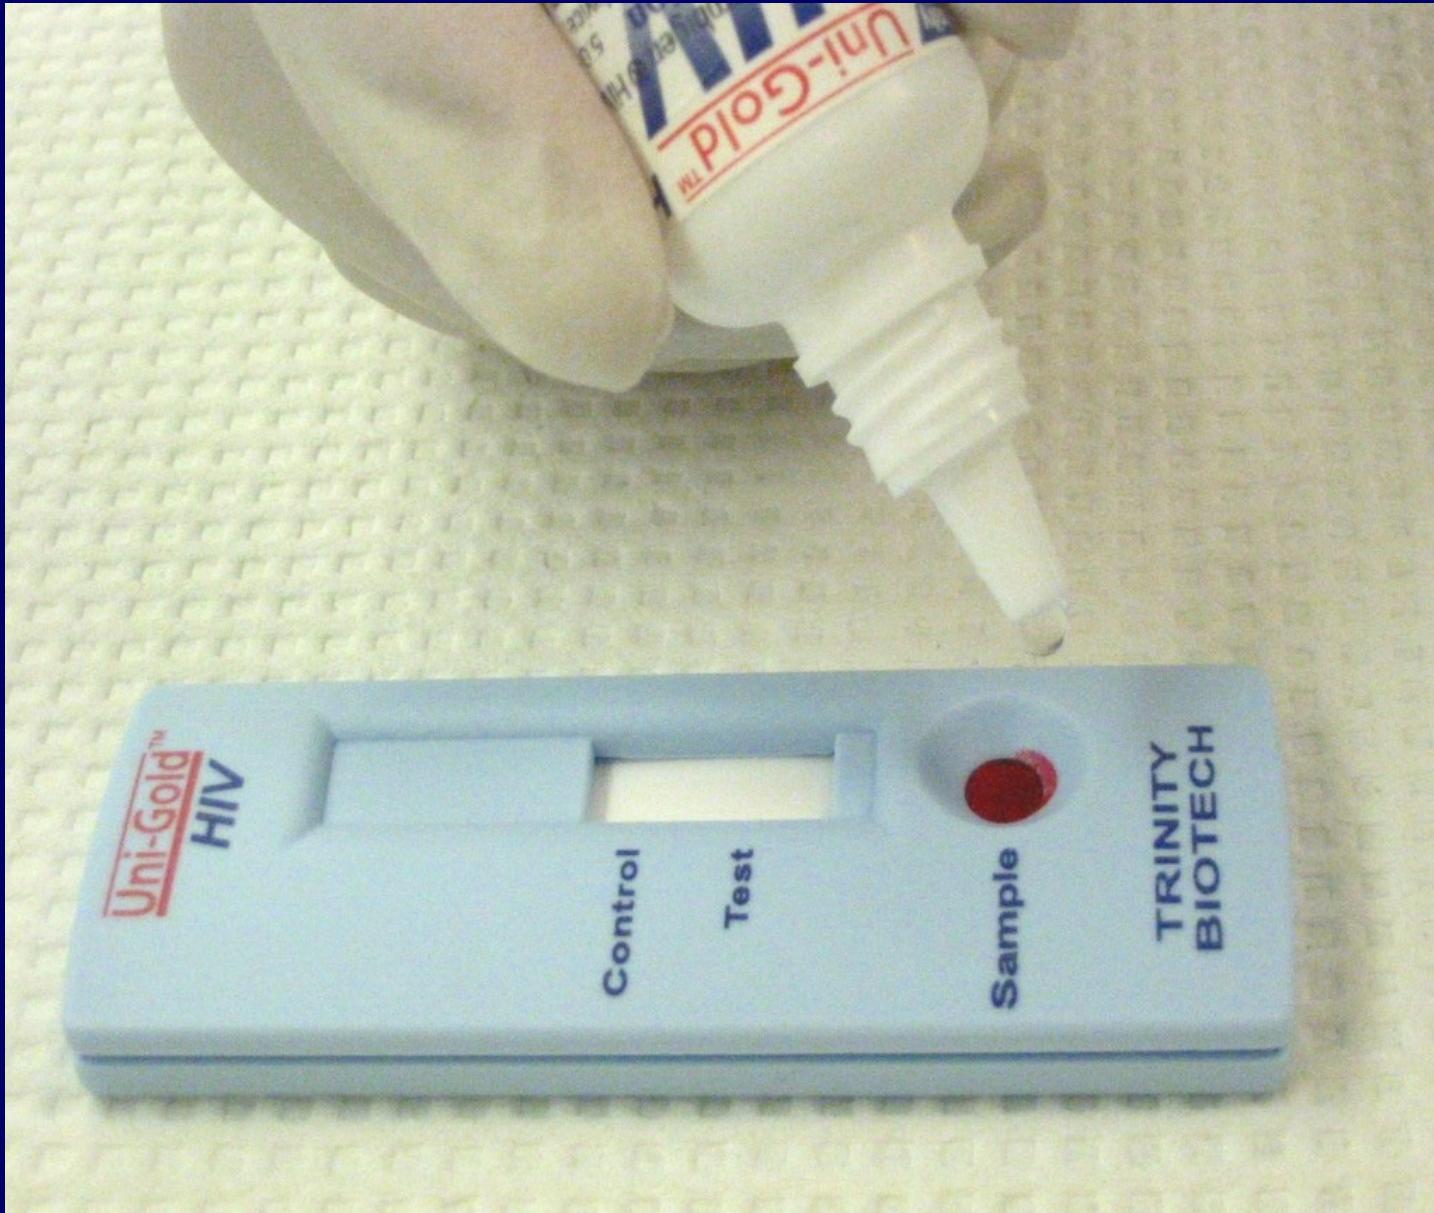

Finger stick with disposable pipette

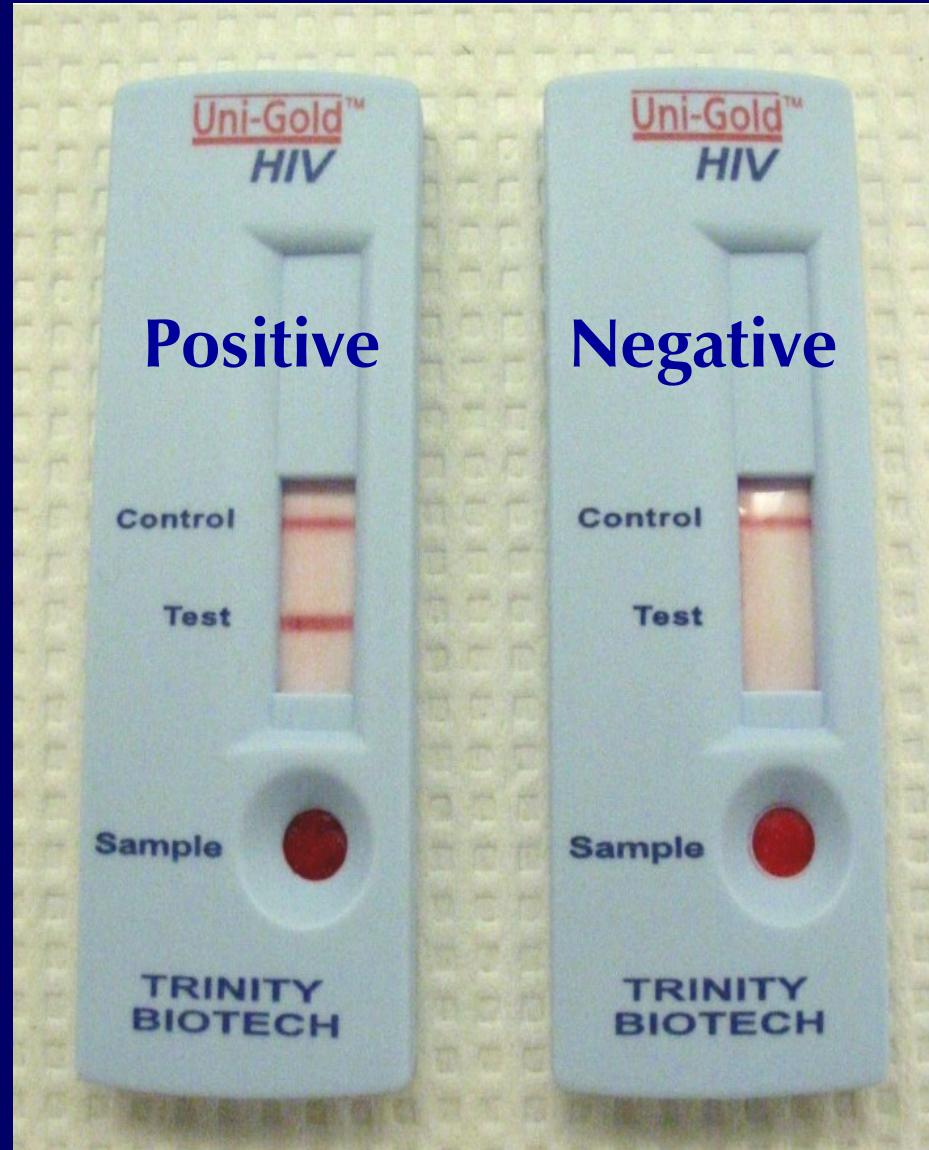

Add 4 drops of wash solution

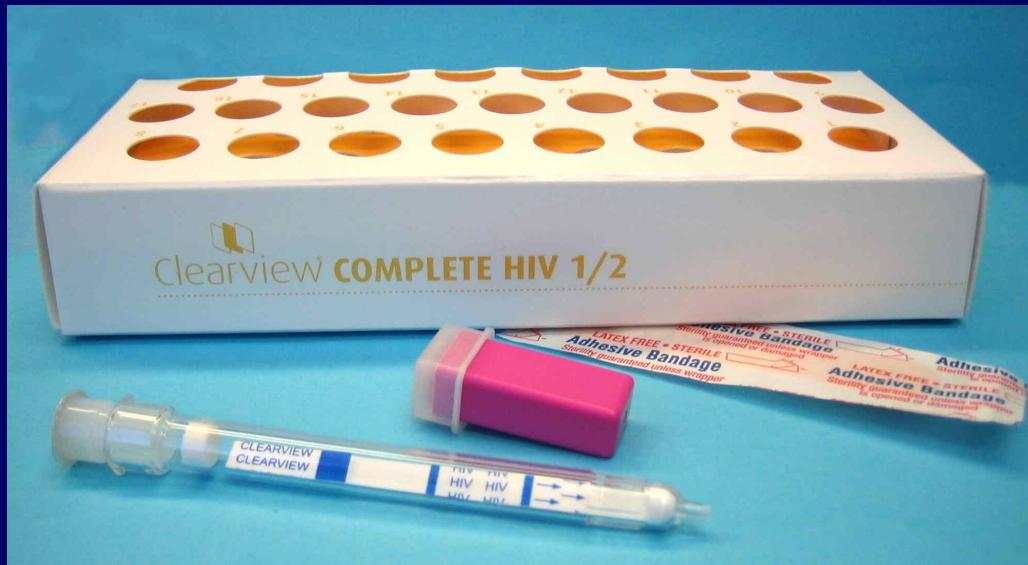

Read results in 10 minutes

Clearview Complete HIV 1/2

- Applied for CLIA waiver for whole blood
- Store at room temperature
- Screens for HIV-1 and 2
- Read time 15-20 minutes
- Shelf life: 2 years

Obtain Fingerstick blood sample

Insert barrel into buffer vial

Read results in 15 minutes

Clearview HIV-1/2 Stat-Pak

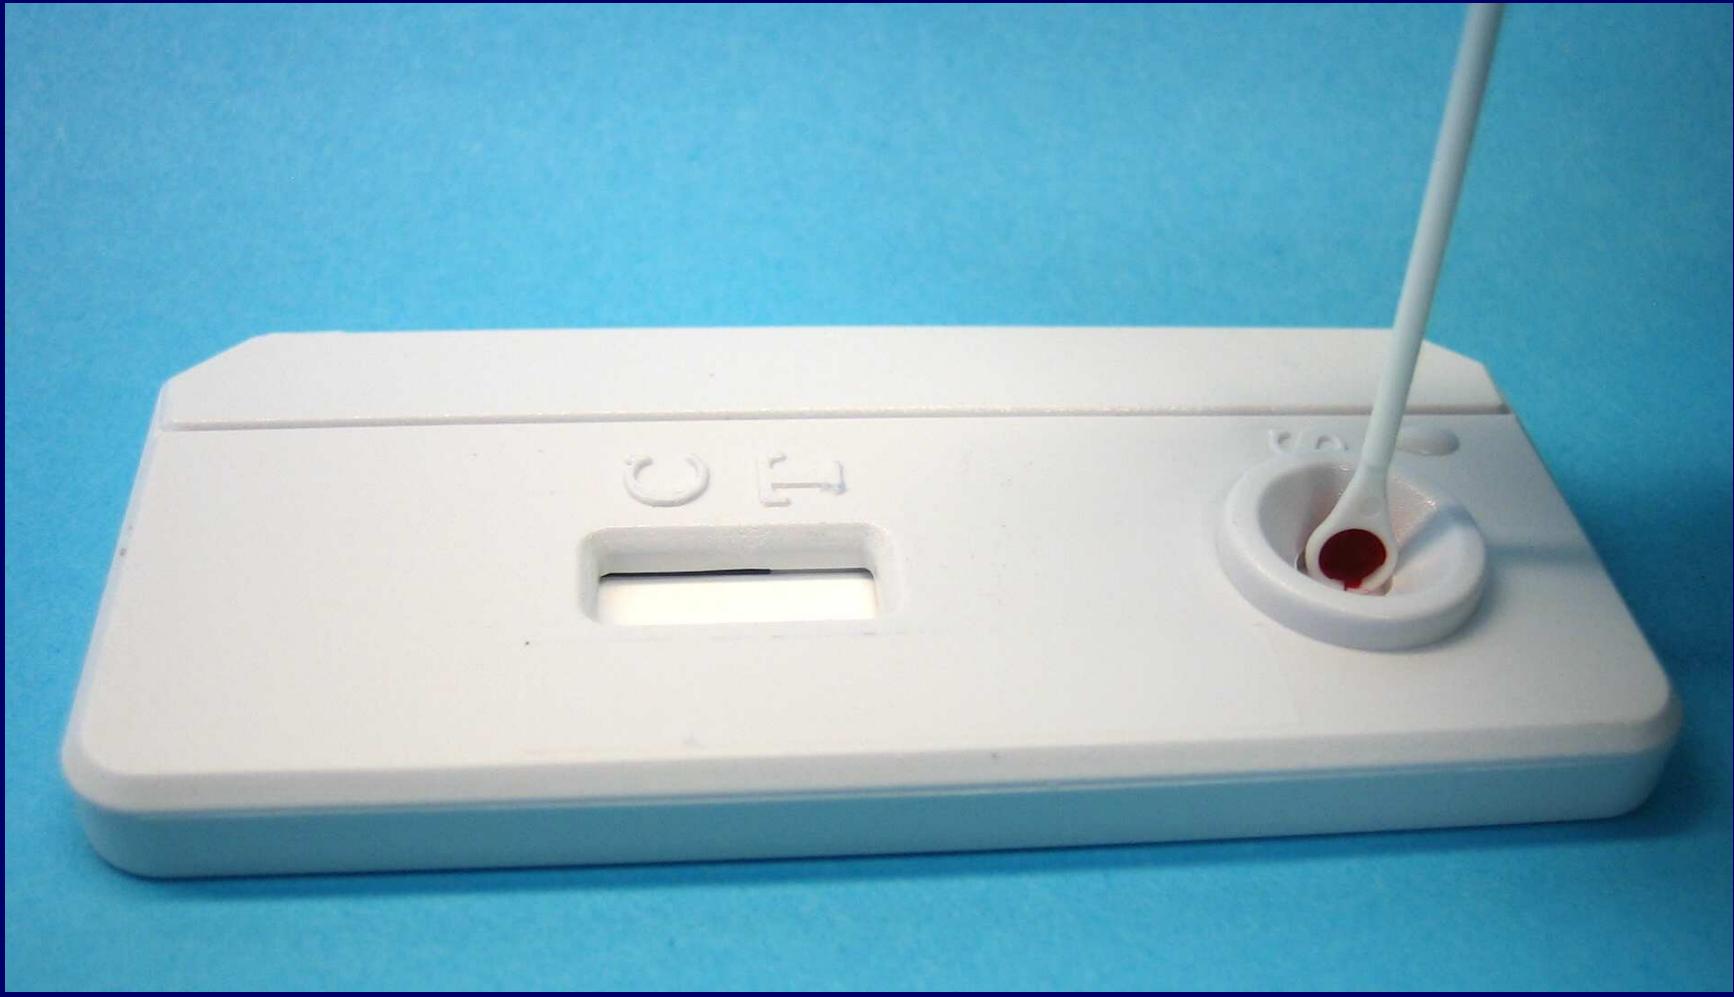

- Clia-waived for whole blood and fingerstick
- Store at room temperature
- Screens for HIV-1 and 2
- Read time 15-20 minutes
- Shelf life: 2 years

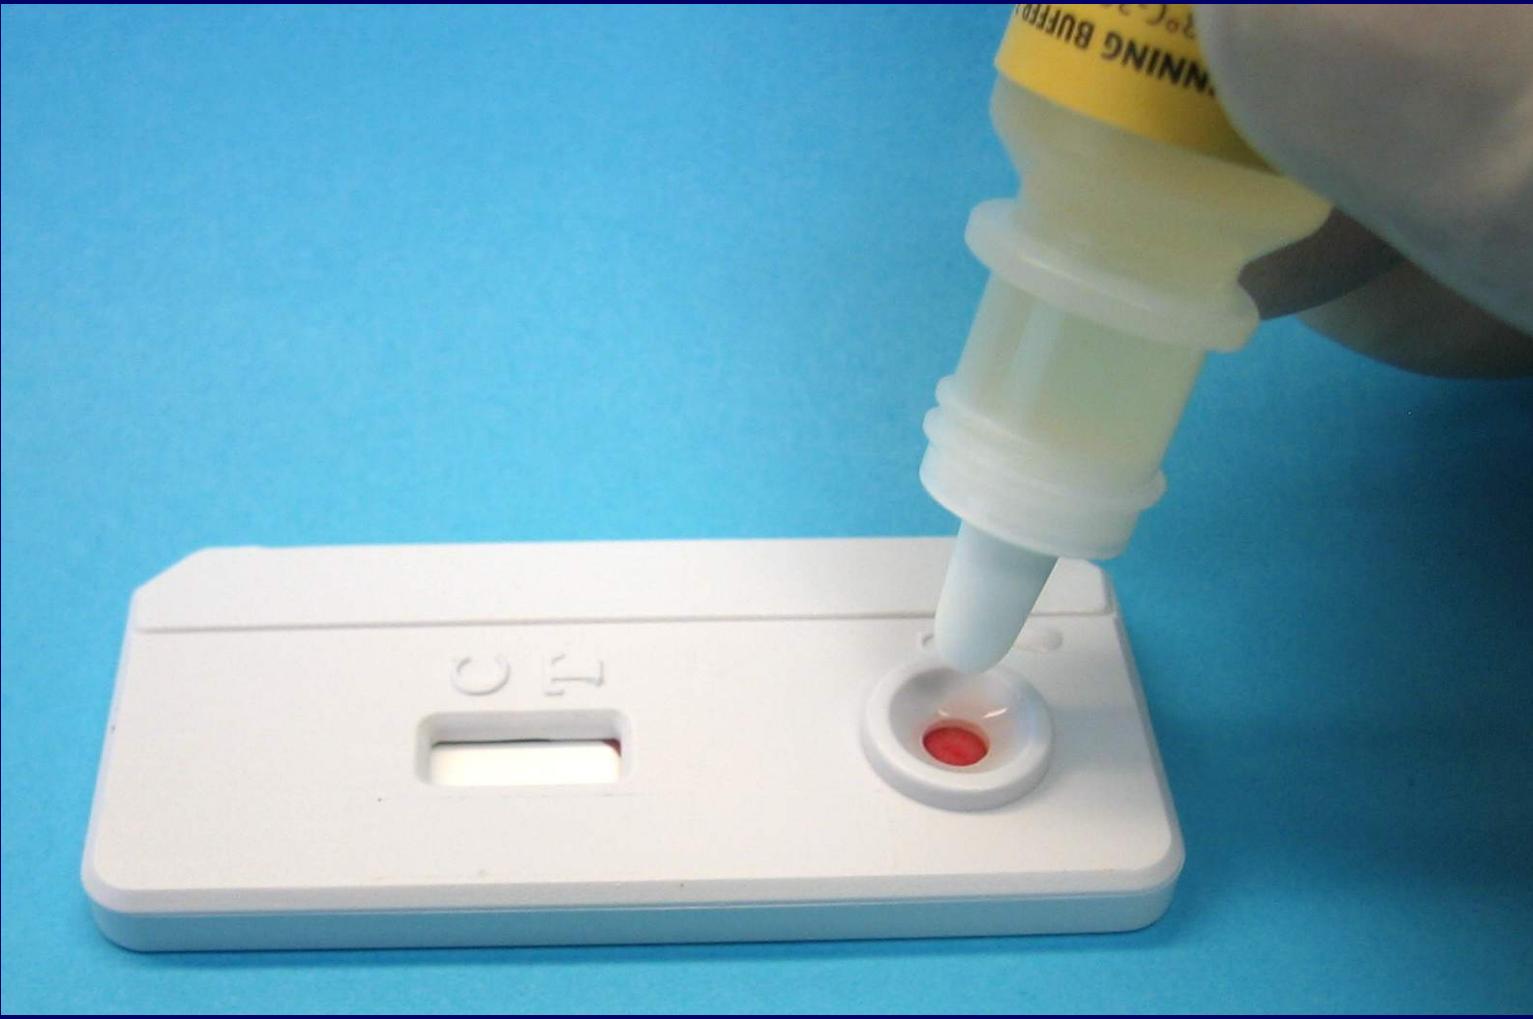

Obtain finger stick specimen...

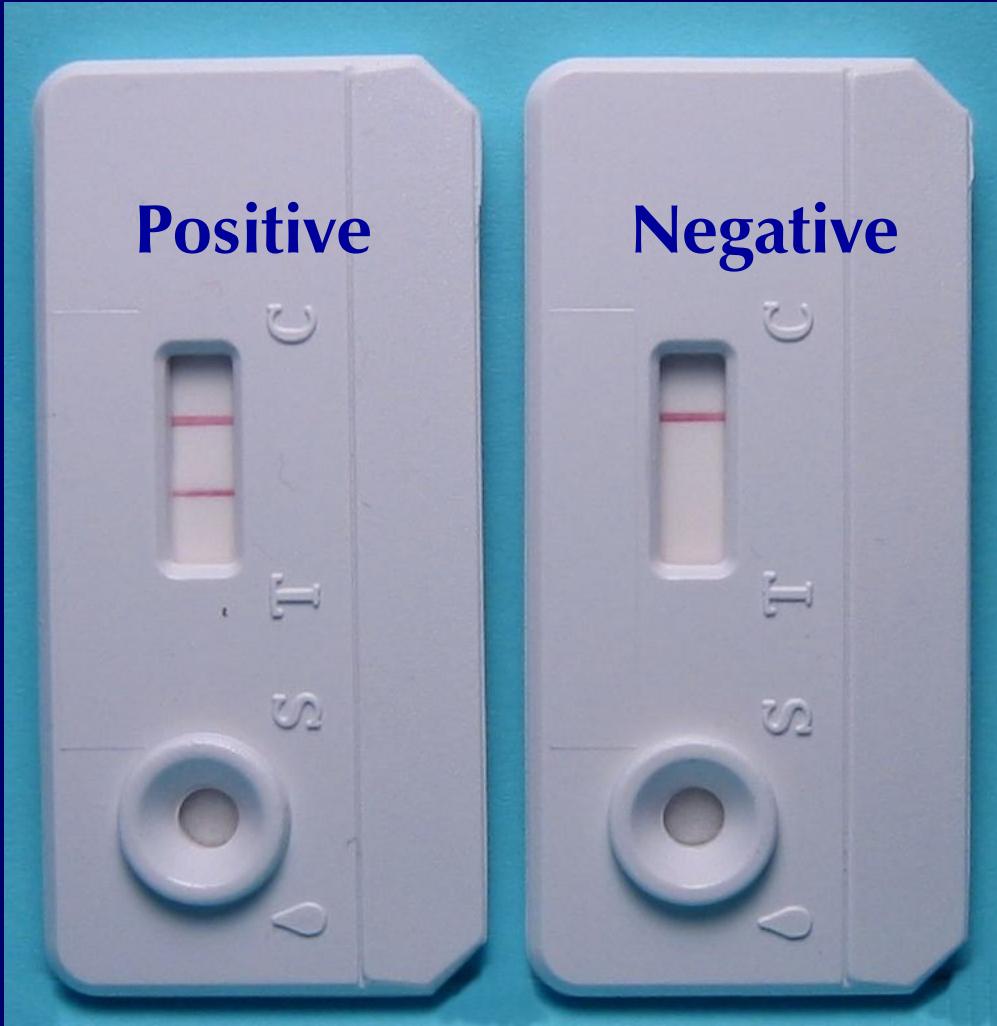

Add 5 microliters specimen

Add 3 drops buffer to well

Read results in 15-20 minutes

Rationale for Revising Recommendations

Developments related to:

- Treatment
- Testing
- Transmission

Knowledge of HIV Infection and Behavior

After people become aware they are HIV-positive, the prevalence of high-risk sexual behavior is reduced substantially.

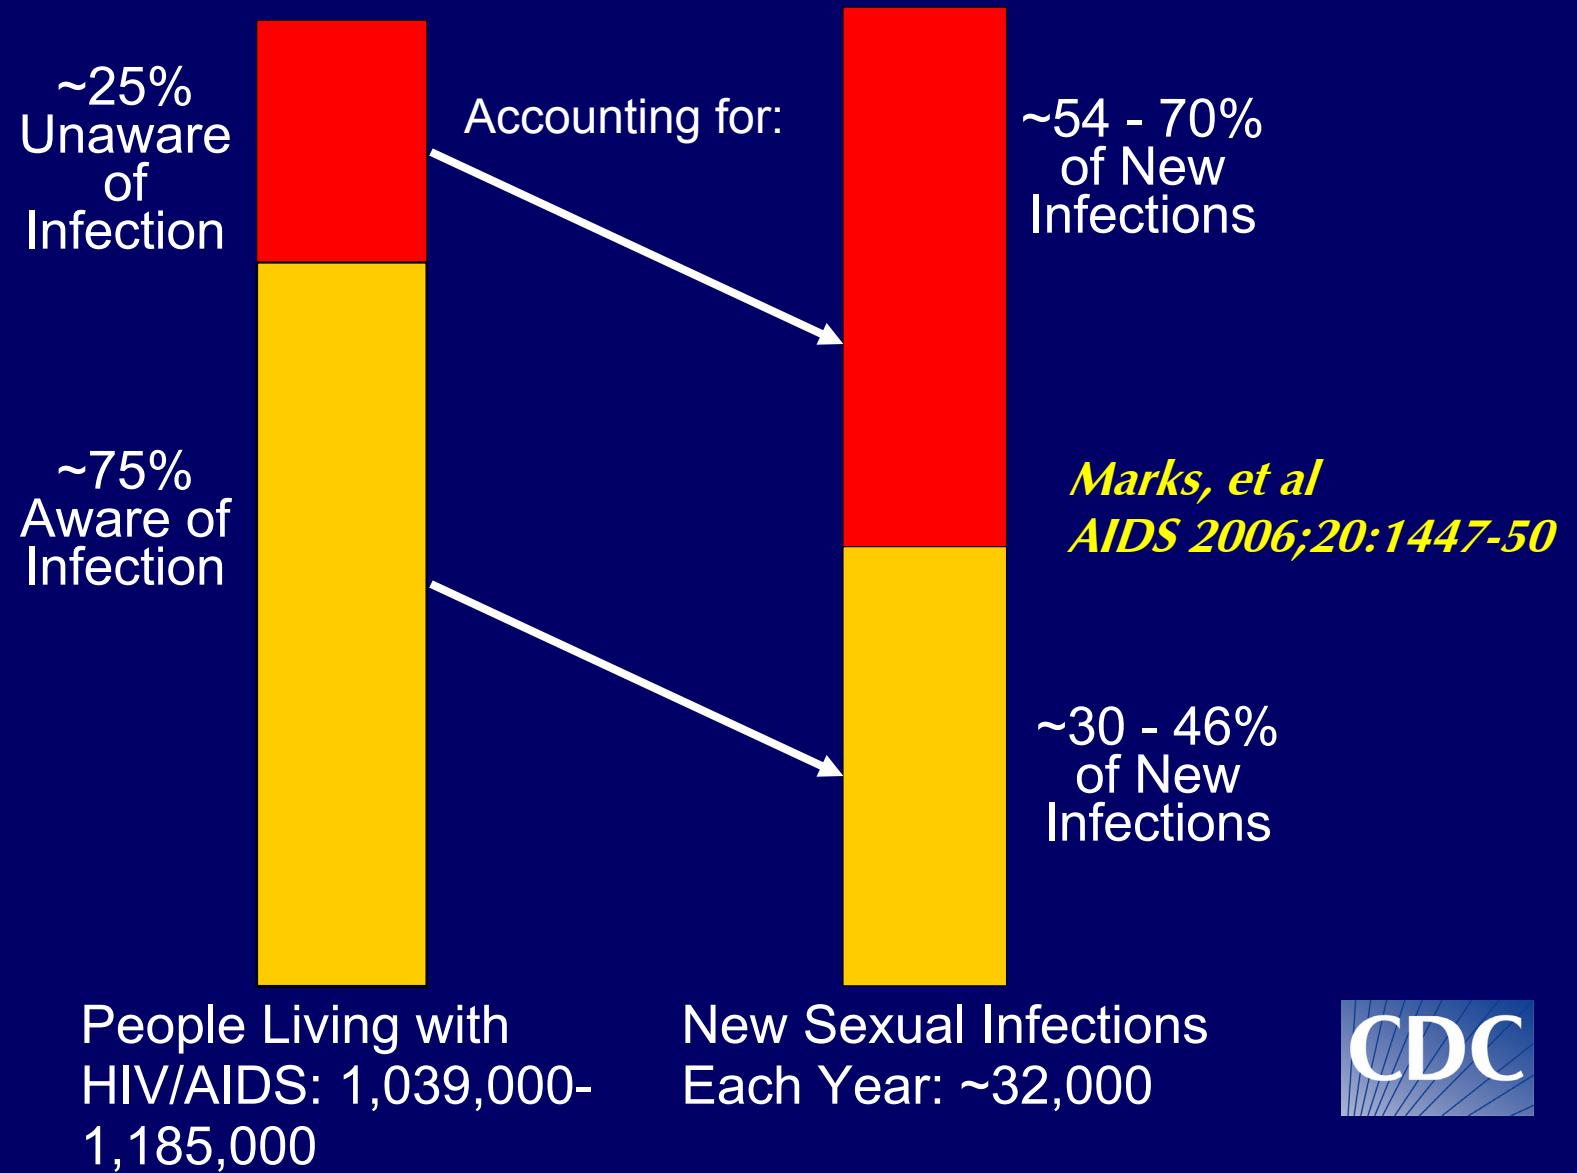

Reduction in Unprotected Anal or
Vaginal Intercourse with HIV-neg partners:
HIV-pos Aware vs. HIV-pos Unaware **68%**

Meta-analysis of high-risk sexual behavior in persons aware and unaware they are infected with HIV in the U.S.

Marks G, et al. JAIDS. 2005;39:446

Awareness of Serostatus Among People with HIV and Estimates of Transmission

People Living with
HIV/AIDS: 1,039,000-
1,185,000

New Sexual Infections
Each Year: ~32,000

Implementation: Examples

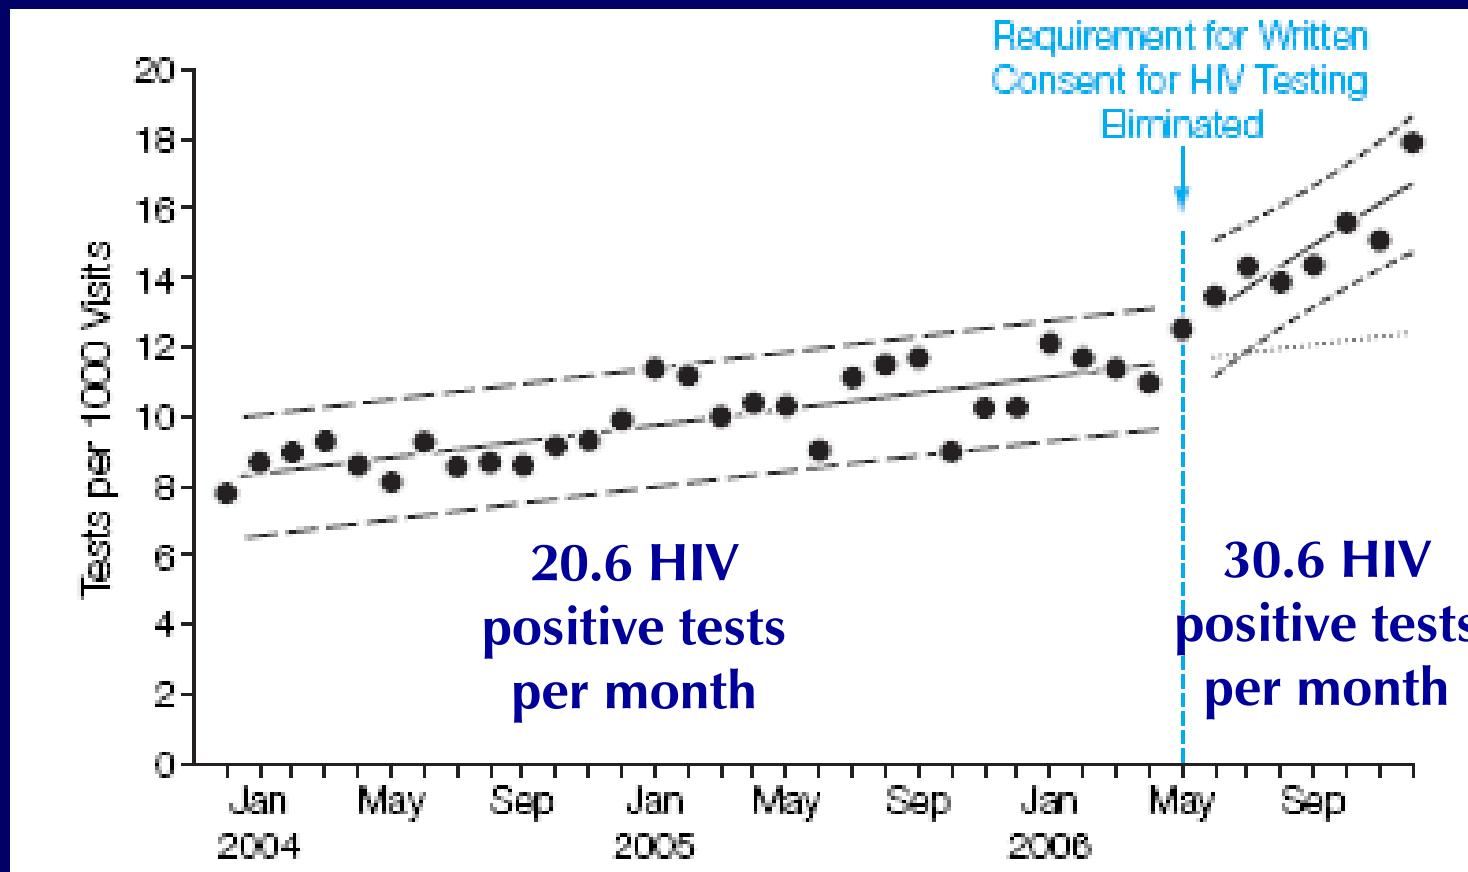

San Francisco Public Health

- Changed requirement for signed informed consent, May 2006
- Compared rates of testing and new HIV diagnoses before and after change

Trends in HIV Testing: San Francisco Public Health

Zetola et al, JAMA March, 2007

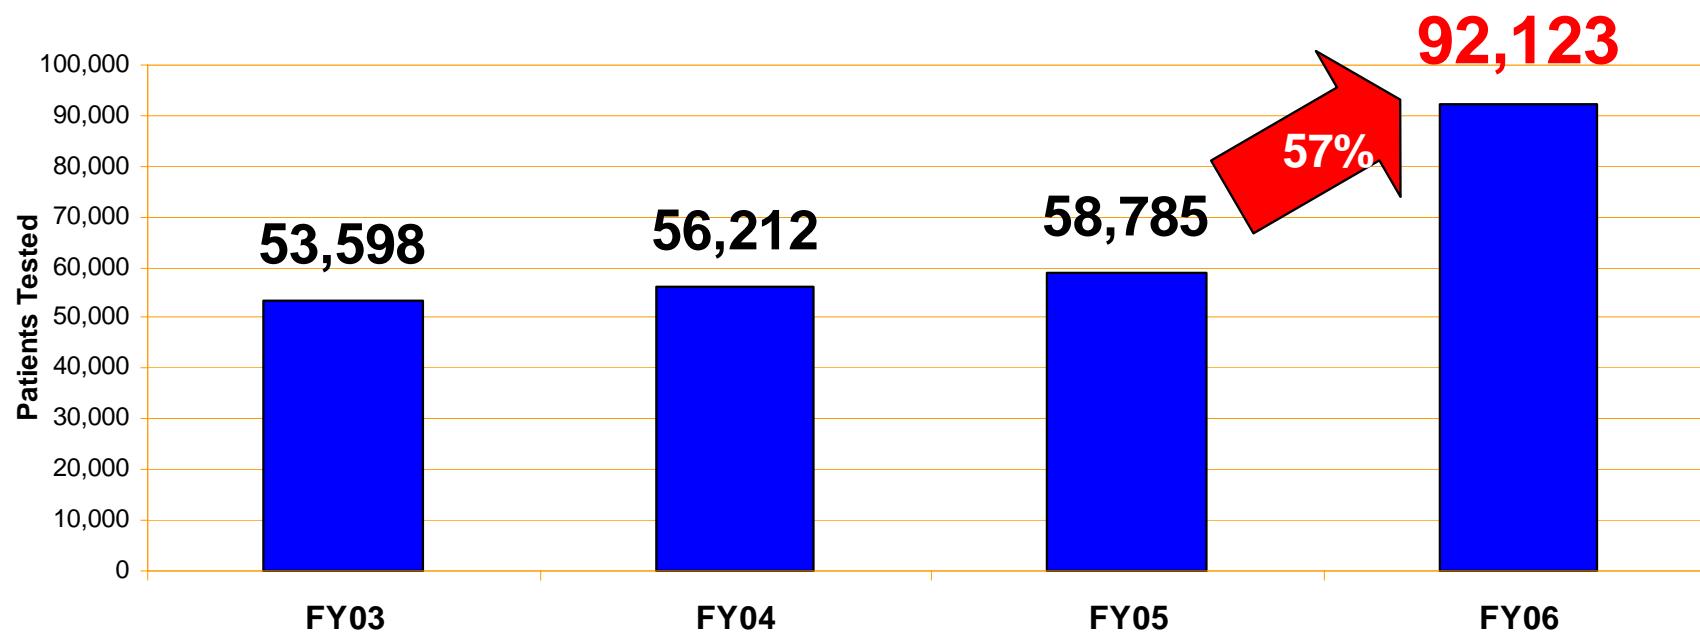

HIV Testing Expansion Initiative

New York City Health and Hospitals Corp

- Increase the number of patients who know their HIV status
- Increase testing from 50,000 per year to 100,000 per year in FY06

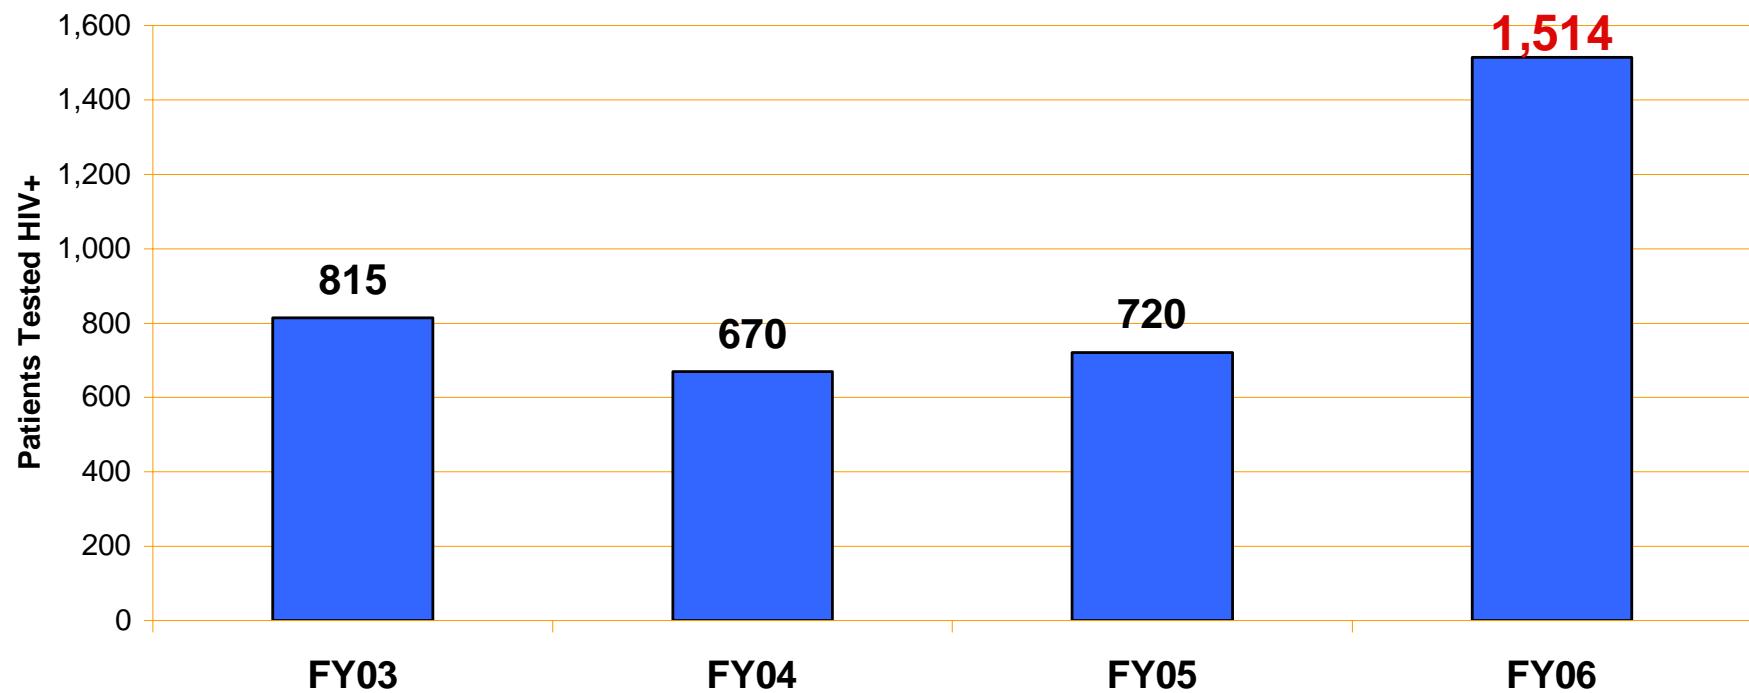

FY06: 57 Percent Increase in HIV Testing

FY03 – FY05 Outpatient Only (Source: PLM)

FY06 Outpatient, Inpatient and ED (Source: Facility Reports)

FY06: Number of HIV Positive Individuals More than Doubled

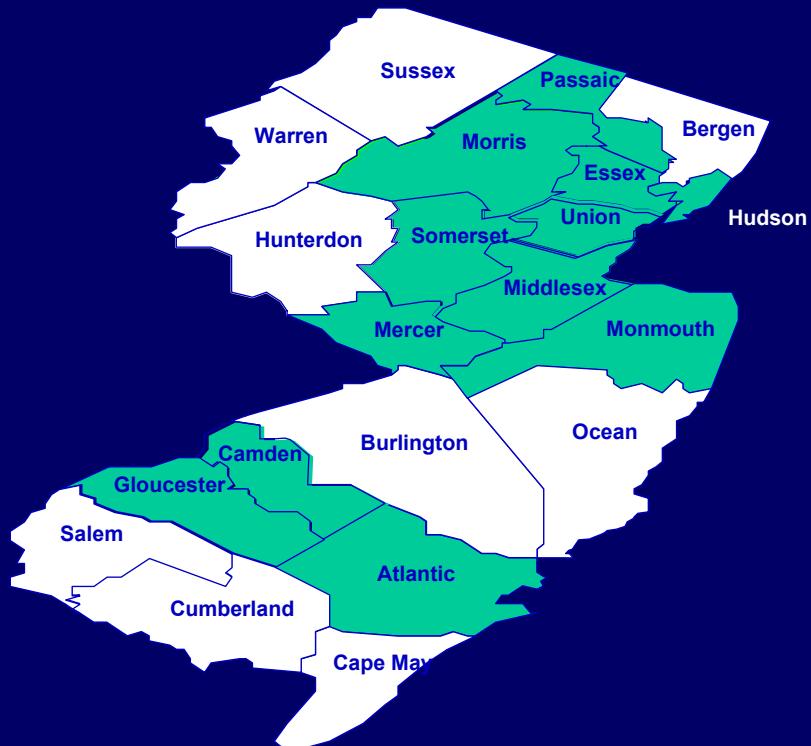

FY03 – FY04 Outpatient Only (Source: PLM)

FY05 Outpatient and ED Pilot Sites Only (Source: PLM and RHT in ED Pilot Project Reports)

FY06 Outpatient, Inpatient and ED (Source: Facility Reports)

ED Rapid Testing, New Jersey

Shaded: counties offer rapid testing

- NJ health department provides counselors, test kits
- 23 EDs now offer rapid HIV testing
- 10,628 tested through November 9, 2006
- 274 (2.6%) HIV positive

Fostering Implementation

- CDC:
 - Six regional workshops for high-priority EDs
- National Medical Association:
 - Work with primary care providers in 5 cities
- Gilead Sciences:
 - Funding support for acute-care testing in 8 cities

Baltimore

Chicago

Detroit

Miami

New York City

Philadelphia

San Francisco

West Palm Beach

Summary

- There is an urgent need to increase the proportion of persons who are aware of their HIV-infection status
- Expanded, routine, voluntary, opt-out screening in health care settings is needed
- Revised recommendations: September 2006
- Several jurisdictions have already begun
